Full Stack DEVELOPER

React | HTML | CSS | JavaScript | Node.js | Express.js

Full-Stack Developer with experience in building responsive and interactive web applications using React, HTML, CSS, JavaScript, Node.js, and Express.js. Docker Proven ability to build impactful platforms that foster social change and responsibility. Strong team player with a focus on high-quality code, security, and continuous learning.

Ready for new challenges in an innovative company.

PROJECTS

| Shomer Ahi- Tel Aviv, Yafo.

Developed a comprehensive full-stack platform designed to assist armed civilians and security forces in real-time event helping to reduce crime and promote responsibility. response and weapon theft prevention. This system provides critical real-time user location and emergency response tracking.

- Engineered and optimized a full-stack platform using **React Native, React.js, and Firebase** including a mobile/web event tracking system and admin dashboard for user and event management. Solved challenges related to real-time data synchronization, location tracking, and system reliability for emergency response features. Continuously improved technical skills through self-learning in React, React Native, and JavaScript to enhance product quality.

“Crypto Trading Simulator Platform”

Developed a full-stack cryptocurrency trading simulator using **React, Express.js, Node.js, and MySQL.**

- Designed and implemented a modern trading platform featuring virtual cryptocurrency buying/selling, portfolio management, transaction history, and real-time balance tracking.
- Leveraged React to build a dynamic, component-based front-end interface with responsive dashboards and interactive trading views.
- Built secure user authentication and account management systems, including login, registration, and personalized user portfolios. Implemented **RESTful APIs with Express.js** for handling trading operations, user data, and market simulation logic.
- Integrated real-time charts, portfolio analytics, and market-style UI inspired by professional crypto exchange platforms.

"Twitter Clone".

- Developed a 1:1 application clone utilizing **React, Express.js, and MySQL**.
- Designed and implemented a full-stack social media application, replicating core Twitter functionality including user authentication, profile management, and posting.
- Leveraged **React** for a dynamic, component-based front-end interface.

Developed a robust **RESTful API** using **Express.js** to handle back-end logic and

routing. Managed persistent user and post data using a **MySQL** relational database.

"Mobile Sudoku game -".

- Developed and published a cross-platform Sudoku mobile app using **React Native, Expo, Tailwind CSS, and AsyncStorage**, featuring a modern UI and smooth gameplay experience on Google Play. Built core game logic (board generation, validation, and input handling) and designed a responsive interface with difficulty levels (Easy / Medium / Hard) and intuitive navigation. Integrated persistent local storage to save and resume game progress, and managed build configuration and deployment to successfully **release the app on the Google Play Store**.

High School Mathematics Teacher | Yaffa Ajyal Tel Aviv, Yafo.

2023

Teach mathematics to grades 9-12, focusing on both academic achievement and mental resilience.

- Specialized in preparing students for 3 and 4-unit matriculation exams.
- Incorporated strategies to make complex topics more accessible and engaging.
- Mentored students on the mental aspects of learning, fostering confidence and success.

EDUCATION

B.Sc. in Computer Science | Holon Institute of Technology.

B.Sc. in Computer Science

2022 - 2025

Specialized in Full-Stack development with a focus on data structures, algorithms, operating systems,

- Completed **three years of high school computer science** (Grades 10-12), building foundational knowledge.

VOLUNTEER

"Volunteer" Program – Tel Aviv, Yafo.

2026

Volunteer is a community-driven initiative aimed at transforming the lives of young individuals through positive actions and mentorship, allows kids to earn TeenCoins by completing tasks that benefit the community. These points can be redeemed for rewards at local businesses.

I had the opportunity to **volunteer my time and expertise** to lead this crucial technological shift. The primary goal was to make the system more accessible and engaging for our target audience—the busy, mobile-first youth.

Technology Stack: The application was built using **React Native**. This choice proved instrumental, allowing us to deploy a high-quality native-feeling app simultaneously on both **iOS and Android devices from a single codebase**
